

Copilot

Here are some key points about **how to search for people on Facebook**:

- **By Name:** Enter the person's name and surname in the search bar. You can refine the search by adding their city or country.
- **By Phone Number:** If you have their phone number, you can use it to find them, especially if they have linked their number to their Facebook account.
- **Without an Account:** You can use search engines like Google or Bing with the format `site:facebook.com [name]` to find profiles without logging in.
- **By Photo:** Although not directly supported, you can use Google Images to search for a person's photo and find their Facebook profile.

Is there a specific method you would like more details on?
